

VPN Access

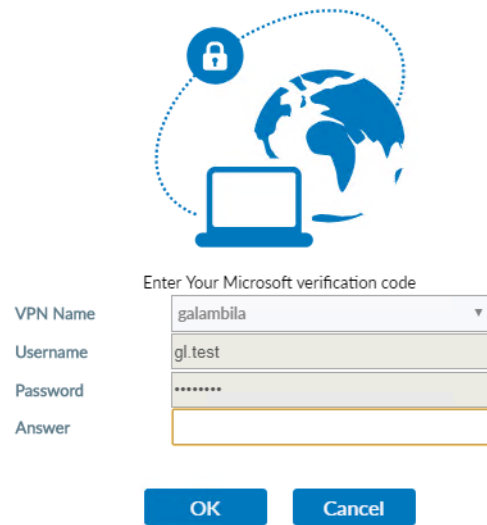

1. Access FortiClient VPN as you normally would.
Login using your normal login information.
2. The VPN will start to connect and then pause as per the image below:

3. You will then receive a push notification on your phone to approve the logon request. You will then be prompted on your mobile device through the **Microsoft Authenticator** App for approval.

- If you **Authenticate** with an **SMS code** you will be prompted to enter your code on the Parallels site.

The image shows a VPN authentication dialog box. At the top, there is a blue icon depicting a globe with a laptop and a padlock, indicating a secure connection. Below the icon, the text "Enter Your Microsoft verification code" is displayed. The dialog contains four input fields: "VPN Name" with a dropdown menu showing "galambila", "Username" with the text "gl.test", "Password" with masked characters "*****", and "Answer" which is currently empty. At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

- Hit OK and the VPN will finish connecting.
Approve any further notification/prompt to confirm MFA approval.
You will then be connected via the VPN.
- If you fail to authenticate in time, you will get an error and you will need to restart the login process. Timeout error below:
